

# TECHHUNT

All the rounds will be played by a pair of students.

## ROUND-1: PICTOGRAPHY

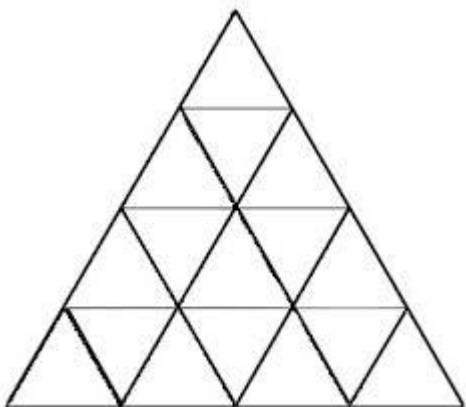

In this round we will pair the students and give one of the student a word(technical), he should draw some pictures regarding that and the other person should guess the word. Each team will be given 5 words. The teams which takes less time to complete this task will be qualified for the next round.

## ROUND-2: MATCH KEYWORDS

In this round we will place 5 key words (technical) on the bench and the participants will be given a set of papers with some words relating the keywords we placed. Participants should match their words with those key words. For example, if we place ohms law on the bench, participants will have words like capacitor, inductor, resistor, current and voltage. They should place resistor, voltage and current near ohms law. Based on the speed they will be selected for 3<sup>rd</sup> round.

## ROUND-3: TREASURE HUNT

In this round clues will be given for the participants to hunt the treasure. The clues will be completely technical. For example, we will give a logic diagram the participants should solve it then they will get a binary equivalent code that should be converted to decimal to get the room number of other clue. And we will draw number of triangles in a big triangle. Participants should count the triangles, some arithmetic operations (we will let them know)are to be performed to get the room number as shown below. There will be 4 such kind of different clues to get the final treasure box. The team which solves all the clues and finds the treasure box faster will be declared as the winner of the game.

For example, In this we have 27 triangles ( $27 \times 12 - 20 = 304$ ) so next clue is found in room no.304.

## REQUIREMENTS:

1. A4 sheets- 50
2. plane note book -1
3. Pens -5
4. Cards (for 2<sup>nd</sup> rounds)-275
5. stick book -1

EXPECTED COST: Rs.120
