

MOZAK SKILZZ

As the name indicates mozak skills (brain skills) is the event which tests the logical thinking, fastness of the participant with their technical knowledge.

ROUND 1:

Participants have to find the resistances of the given resistors with the help of color coding. Those who find more number of resistances with in the given time are selected for 2nd round.

ROUND 2:

- In this round depending on the branch of the candidate he will be given 4 technical topics which are numbered as 1,2,3,4 and bulk of cards are present in front of him which contain the technical terms.
- From this bulk of cards he should pick 4 cards for each topic which are related to those 4 technical topics respectively. This should be done with in the given time.
- Once he completed this task, he should randomly choose one of the four numbers which indicates the technical topic then a question is asked related to that topic whose answer exists in the matched 4 cards.

ROUND 3:

Questions are given to the participants which has 4 options(1,2,3,4) for each question. They should find the number (option) by decoding the complex digital circuit designed with simple logic gates which reveals the correct option of the given question.

STATIONARY REQUIREMENTS:

A4 sheets -50

Cards-50

Resistors-50

Total cost -800.
